

ABSTRACT OF THE DISCLOSURE

An injection-molding tool for a golf club grip includes a base member and a detachable molding member attached thereto. The base member is provided with a screw rod extended therefrom for screw connection. The detachable molding member includes a screw hole for receiving the screw rod of the base member, and a plurality of molding plugs extended therefrom and disposed around the screw hole. Each of the molding plugs has a cross-sectional configuration to thereby form a desired type of a structural elastic buffer of the golf club grip.
